

PENERGETIC-w Doses:

Regular application every two weeks (summer) to every three weeks (autumn and winter)

Application instructions penergetic-w

The application is very simple. Mix the required amount into plenty of water and distribute evenly into the body of water that is to be treated, for example with a watering can.

Surface water:

With the first application

up to 10 m ² surface area	5 g/m ²
up to 100 m ² surface area	3 g/m ²
up to 1000 m ² surface area	2 g/m ²
up to 2000 m ² surface area	1,5g/m ²
from 2000 m ² surface area	1 g/m ²

Further applications

Until ecologically stabilised, re-treat after a maximum of 4 weeks with 1g of penergetic-w per m². Otherwise treat as required, e.g. after strong rainfalls with 1g/m².

Tip

penergetic-w supports micro-organisms. The self cleansing process can be speeded up if a bucket of water and sediment from a healthy pond is poured into the water body that is to be treated.

Rainwater collection container

With the first application

up to 10 m ³ water volume	5 g/m ³
up to 100 m ³ water volume	3 g/m ³
from 100 m ³ water volume	2 g/m ³

Further applications

1 g penergetic-w per m³ of added water.
